

MUDHALVAN PROJECT

ServiceNow IT Procurement Automation

Project Title: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Milestone 2: Flow Assignment

This milestone focuses on assigning the Flow created for the Standard Laptop service catalog item. The purpose is to connect the Standard Laptop Task flow with the Standard Laptop catalog item so that the request can use the required flow-based automation.

Activity 1: Flow Assignment to Standard Laptop Service Catalog

Objective: Configure the Standard Laptop catalog item in ServiceNow by removing the existing process-engine automation where required and assigning the newly created Flow named Standard Laptop Task.

Procedure

1. Open ServiceNow and log in to the required instance.
2. Open the All menu and search for Maintain Items.
3. Select Maintain Items from the search results.
4. In the Name field, search for Standard Laptop and open the Standard Laptop record.
5. Inside the catalog item record, select the Process Engine tab.
6. Remove the remaining process-engine automation entries that are no longer required, leaving the Flow configuration to be used.
7. In the Flow field, select/add the flow named Standard Laptop Task.
8. Use the form menu/save option to save or update the Standard Laptop catalog item record.

Configuration Summary

Field / Area	Configuration
Catalog Item	Standard Laptop
Configuration Tab	Process Engine
Automation	Flow
Flow Name	Standard Laptop Task
Final Action	Save / Update the catalog item record

Milestone 2 – Expected Result

After completing the configuration, the Standard Laptop service catalog item should have the Standard Laptop Task Flow assigned under Process Engine. Saving the record completes the flow-assignment activity. This connects the catalog item with the automation designed for standard laptop requests.

Benefits of This Milestone

- Reduces manual handling of standard laptop requests.
- Connects the catalog item directly with the required Flow.
- Improves consistency in request processing.
- Supports faster and more structured IT procurement operations.
- Provides a foundation for further automation and task assignment.

Conclusion

Milestone 2 successfully configures the Standard Laptop service catalog item to use the Standard Laptop Task Flow. This step is an important part of automating the IT procurement process in ServiceNow and helps move standard laptop requests through a defined workflow.
